

## Fraxel Laser- latest skin care technology

Skin beauty plays an important role in today's world. Majority of people are crazy for looking smart and beautiful, which is increasing the number of skin care technologies. One of the outcomes of such craziness is Fraxel laser technique that removes the damaged skin without affecting the healthy tissues surrounding it.

Fraxel helps in stimulating the restorative process of the body. It develops new skin and collagen after removing the skin damaged by aging or by sun. It helps in removal of wrinkles near the eye, acne scars, and melasma. Generally one to five treatments are required at the time gap of approximately one month.

The Fraxel Laser has been specifically designed to manipulate the small volumes of target tissue. The medical effects of this technique are to change the appearance of aging and sun-damaged skin with time. Small microscopic wounds result in a wound healing process within the body and cause coagulation of collagen fibers in our skin.

More about Fraxel

Fraxel includes the latest skin care laser technology with the purpose to stimulate the restorative processes of the body by controlling the damage done to the skin. Fraxel reaches deep into the second layer of the skin, the dermis, and helps in stimulating the restorative abilities of the body and thus new skin and collagen is formed.

In this way, the older damaged skin is removed from the epidermal layer, which forms the outermost area of skin. In this process, small controlled skin damage areas are removed by a healthy skin with minimum healing time. Thus this technology is proven effective in skin rejuvenation.

To whom is this technology beneficial?

The Fraxel laser technology is made for anyone suffering from wrinkles near the eye, acne scars, melasma (mask of pregnancy). It is the best way to achieve clean, smooth and good looking skin. Other disorder related to pigmentation issues in skin and skin resurfacing are effectively done with this technique. Fraxel lasers are of three types:- Fraxel restore Fraxel refine Fraxel repair Which body areas can be treated with Fraxel?

Generally a dermatologist advice is required in regard of discussing the body parts to be treated. It can be used on the following areas:- Chest Neck Hands Fraxel treatments

The number of required treatments is decided on recommendation of dermatologist. It depends on person to person. Generally one to five treatments are required at the time gap of a month. And changes can be observed within two to three months period.
